

Shrink Installation Time. Grow Your Bottom Line.

The orientation of the mixed and cold ports on Honeywell AMX Series Mixing Valves eliminates the need for elbows on water heater installations, dramatically reducing installation time. The increased productivity adds up to increased profits.

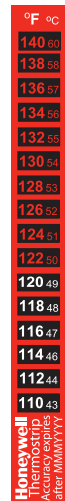

- Patented Direct Connect™ design cuts installation time and number of parts in half
- Teflon® coating increases product life and reduces callbacks
- Provides increased safety and more available hot water for your customers
- Built-in recirculation port available
- Meets ASSE 1017, IAPMO and CSA requirements
- Available in multiple connection types – NPT, Sweat, CPVC, etc.
- NPT bottom allows direct connection to water heater

The AMX mixing valve cuts installation time and number of parts in half.

Standard mixing valve installation.

The thermostrip is affixed to the mixed water outlet piping, allowing convenient temperature monitoring that saves installation and setup time.
