

( (

# **Model Number**

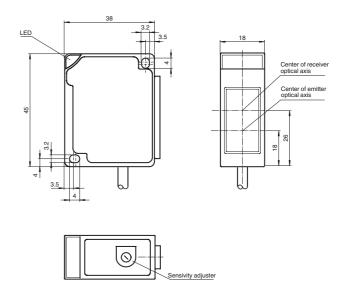

### M13/MV13/30/40b/115

Thru-beam sensor with 2 m fixed cable

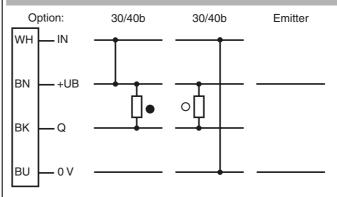

### **Features**

- Visible red light
- Pre-fault indication
- Light/dark ON, programmable
- Control input for light/dark switching

# **Dimensions**

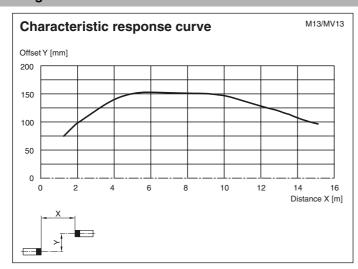

# **Electrical connection**

- O = Light on
- = Dark on

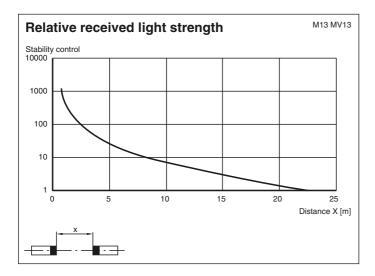

| Technical data                     |                |  |
|------------------------------------|----------------|--|

# Additional Information

#### Conventional use:

The emitter and receiver of the single path light beam switch are housed in different cases that are separated from each other. The emitter transmits directly to receiver. If an object interrupts the light beam the switching function is initiated.

### **Mounting instructions:**

The sensor can be fastened over the through-holes directly or with the included support angle.

The base surface must be flat to avoid distorting the housing during mounting. It is advisable to secure the bolts and screws with washers to prevent misalignment of the sensor.

#### Instructions for adjustment:

Emitter and receiver mount to opposite each other and align roughly.

The exact adjustment takes by swivelling the emitter or receiver horizontally and vertically. With optimum light reception the yellow LED (only receiver) lights up constantly. In case of bad alignment, the red LED lights up.

### Object detection check:

Move the object into the light beam. If the object is recorded, the yellow LED switch off. If it doesn't go off, reduce the sensitivity with the potentiometer until it goes off. It should light up constantly again when the object is removed.

The red LED lights up if reception deteriorates (e.g. soiled lenses or by maladjustment ) and when falling short of the stability control.

#### **lustration:**

We recommend that you clean the optical interfaces and check the plug-in connections and screw connections at regular intervals
