

Model Number

SC3,5-N0-WH

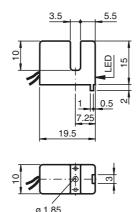

Features

- Comfort series
- 3.5 mm slot width
- Usable up to SIL2 acc. to IEC 61508

Connection

Dimensions

Technical Data			
General specifications			
Switching element function		NAMUR, NC	
Slot width		3.5 mm	
Depth of immersion (lateral)		5 7 typ. 6 mm	
Installation			
Output polarity		NAMUR	
Nominal ratings			
Nominal voltage	U_o	8.2 V (R _i approx. 1 kΩ)	
Operating voltage	U_{B}	5 25 V	
Switching frequency	f	0 3000 Hz	
Hysteresis	Н	0.06 0.1 mm	
Suitable for 2:1 technology		yes , Reverse polarity protection diode not required	
Current consumption			
Measuring plate not detected		≥ 3 mA	
Measuring plate detected		≤ 1 mA	
Switching state indication		LED, yellow	
Ambient conditions			
Ambient temperature		-25 100 °C (-13 212 °F)	
Mechanical specifications			
Connection type		flexible leads LIY, 500 mm	
Core cross-section		0.14 mm ²	
Housing material		PBT	
Protection degree		IP67	
General information			
Use in the hazardous area		see instruction manuals	
Category		1G; 2G; 1D	
Compliance with standards and directives			

Standard conformity	
NAMUR	EN 60947-5-6:200

TW WINGTO	IEC 60947-5-6:1999
Electromagnetic compatibility	NE 21:2007
Standards	EN 60947-5-2:2007
	IEC 60947-5-2:2007

Approvals and certificates

UL approval	cULus Listed, General Purpose
CSA approval	cCSAus Listed, General Purpose
CCC approval	Products with a maximum operating voltage of $\leq 36 \text{V}$ do not bear a CCC marking because they do not require approval.

 \leq 150 nF; a cable length of 10 m is considered.

≤ 150 µH; a cable length of 10 m is considered.

Dangerous electrostatic charges on the fixed connection cable must be taken into account for lengths equal to and exceeding the following values:

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EC-Type Examination Certificate has to be observed. The special conditions must be adhered to!

The temperature ranges, according to temperature class, are given in the EC-Type Examination Certificate. Note: Use the temperature table for category 1 !!! The 20 % reduction in accordance with EN 1127-1:2007 has already been accounted for in the temperature table for category 1.

Laws and/or regulations and standards governing the use or intended usage goal must be observed.

The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety

The associated apparatus must satisfy the requirements of category ia. Due to the possible danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation of the power supply and signal circuit is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met.

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

When used in the temperature range below -20 °C the sensor should be protected from knocks by the provision of an additional housing.

≤ 150 nF; a cable length of 10 m is considered.

 \leq 150 μH ; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual.

The EC-Type Examination Certificate has to be observed.

The special conditions must be adhered to!

The maximum surface temperature of the housing is given in the EC-Type Examination Certificate.

Laws and/or regulations and standards governing the use or intended usage goal must be observed.

The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety.

The associated apparatus must satisfy at least the requirements of category ia IIB or iaD. Because of the possibility of the danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation in the power supply and signal circuits is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met. The intrinsically safe circuit has to be protected against influences due to lightning.

When used in the isolating wall between Zone 20 and Zone 21 or Zone 21 und Zone 22 the sensor must not be exposed to any mechanical danger and must be sealed in such a way, that the protective function of the isolating wall is not impaired. The applicable directives and standards must be observed.

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible.

The connection cables are to be laid in accordance with EN 50281-1-2 and must not normally be subjected to chaffing during use.
