## Features

- 2-channel isolated barrier
- 24 V DC supply (bus powered)
- Output 40 mA at 12 V DC, 52 mA current limit
- Contact or logic control input
- Line fault detection (LFD)

## Function

This isolated barrier is used for intrinsic safety applications. It supplies power to solenoids, LEDs, and audible alarms located in a hazardous area.
It is controlled with a switch contact, transistor, or logic-level signal.
At full load, 12 V at 40 mA (with 52 mA current limit) is available for the hazardous area application.
Line fault detection of the field circuit is indicated by a red LED and an output on the fault bus. The fault conditions are monitored via a Fault Indication Board.
This module mounts on a HiD Termination Board.

## General information

Supplementary information

Digital Output

SL1: 1a(-), 1b(-); 2a(+), 2b(+)
20.4 ... 30 V via Termination Board

65 mA at $24 \mathrm{~V}, 300 \Omega$ load (per channel)
1.1 W at $24 \mathrm{~V}, 300 \Omega$ load (per channel)

SL1: 8a(+), 7a(-); 10a(+), 9a(-)
external switch (dry contact or open collector) non isolated or logic signal input fully floating
output on with contact close or transistor on or logic level > 4 V
output off with contact open or transistor off or logic level $<1.5 \mathrm{~V}$

SL2: $5 \mathrm{a}(+), 5 \mathrm{~b}(-) ; 1 \mathrm{a}(+), 1 \mathrm{~b}(-)$
40 mA at 12 V DC, 52 mA current limit
$0.1 \ldots 5 \mathrm{k} \Omega$
max. 250 Hz
turn-on time 1 ms , turn-off time 2 ms , at $300 \Omega$ load

SL1: 6b
open collector transistor (internal fault bus)
4 mA typical
lead short-circuit detection at $<25 \Omega$
lead breakage detection at > $100 \mathrm{k} \Omega$ typical

## Configuration

$\xrightarrow{\circ}$
Channel 2 only for HiD2874 and HiD2878.

Configure the device in the following way:

- Push the red Quick Lok Bars on each side of the device in the upper position.
- Remove the device from Termination Board.
- Set the DIP switches according to the figure.

The pins for this device are trimmed to polarize it according to its safety parameter. Do not change! For further information see system description.

When both channels of the solenoid driver are operated in normally energised condition, either the load must be reduced or increased spacing/ventilation be applied to reduce the temperature rise. Contact Pepperl+Fuchs for guidance.

## Output characteristic
